

Logesta, the intelligent transport

Logesta
group

Logesta, leading the long haul transport.

Logesta is a company specialist in long-haul transport that manages a fleet of more than **1.600 lorries** with a clear foundation in technology, placing it among the leading full cargo operators in Europe.

Our **mission** consists in meeting the demand for a transport management service, providing our clients a **quality service** based on our added values: security, geographic coverage, technology, quality and workforce.

Our **vision** is to become the **leading long-haul goods transport company** continuously growing, developing and permanently guaranteeing excellent service.

We transport your goods as you would do it.

To belong to Logista Group, a guarantee

Logesta belongs to Logista Group, the comprehensive logistic operator leader in Spain and Portugal and one of the most important in Europe. Thanks to that, we have one of the widest transport and infrastructures networks, specialized and technologically advanced in Europe.

A wider presence to achieve greater efficiency

Thanks to our extensive infrastructure and transport network, developed through an effective expansion strategy, we have been positioned in Spain, Portugal, Morocco, France, Italy, Holland, Germany and Poland since 2002. Moreover, we are currently expanding our business lines into Eastern Europe, in a such a way that we can therefore guarantee a quality, border-free service.

This growth has made it possible for us to reinforce and to optimize our international flows allowing the extension of our service offer without taking into account the borders.

These figures are our endorsement:

Logesta Group :

● 1.600 vehicles.

● Affiliates & Own Branches.

● We travel more than 120 million kilometres every year.

● We move more than 5 million tonnes.

● Logesta moves more than 200,000 annual loads (road, train and short sea shipments).

The security in the transport, our key element.

To provide the maximum confidence level, Logesta offers:

1. 24x7

Security Department 24 x 7.

2. Tracking

On-line tracking in real time: Location of vehicles in transit by GPRS, as well as a navigation system for the online communication with drivers.

3. International monitoring station

24 hours connection to the Monitoring Station Network throughout Europe for any support or intervention in case of incidents.

4. Night rests

Night rests are exclusively carried in car parks or centres that are part of our homologated parking network.

5. Risk analysis

Risk analysis of each region taking into account several factors, like quality of the infrastructures and criminality figures, implementing additional security measures if necessary.

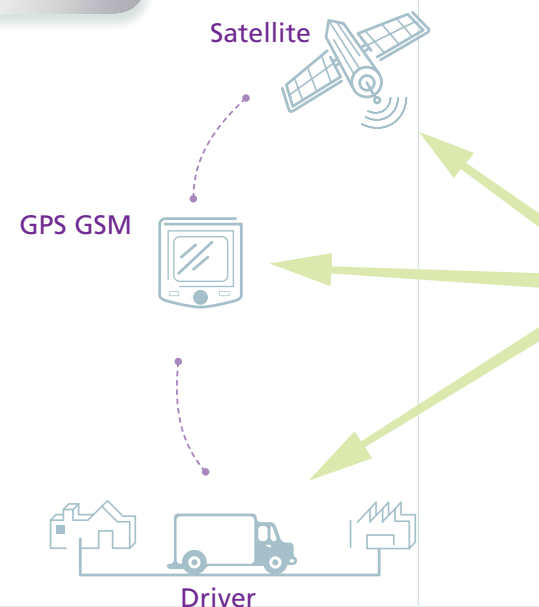

6. Controlled routes

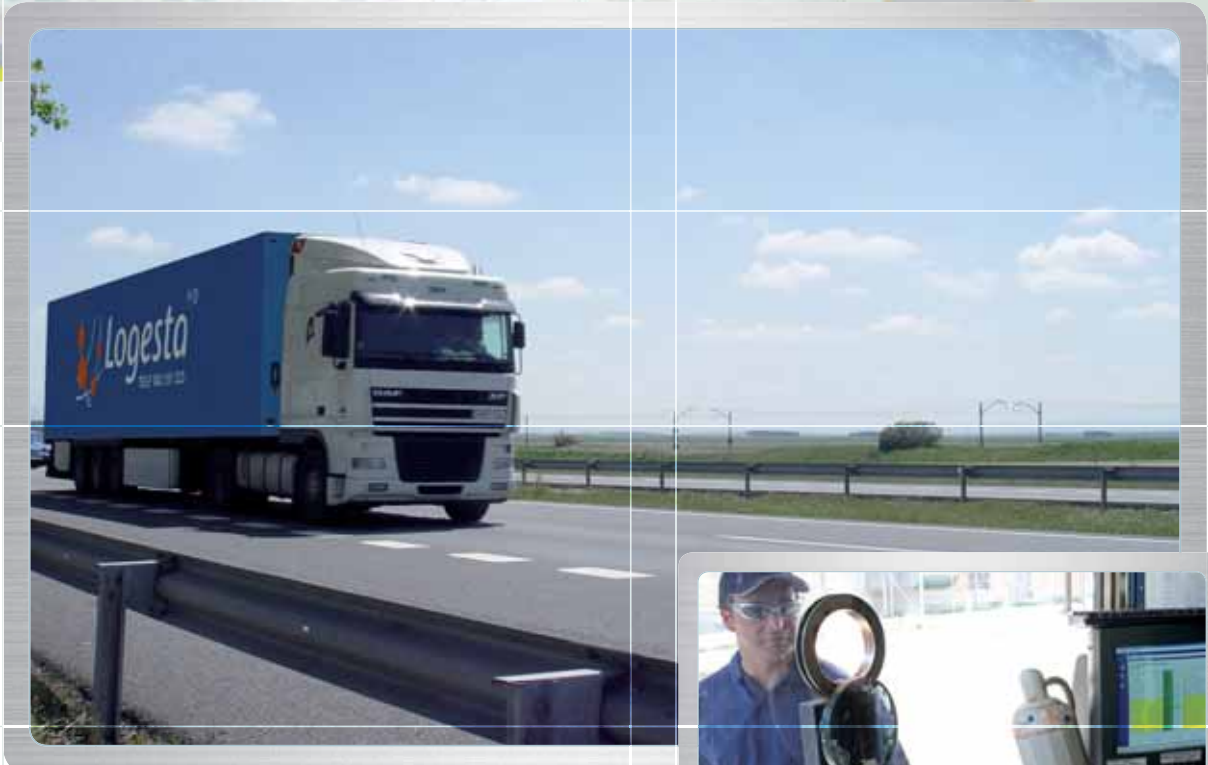

Stops and routes are controlled permanently, escorts and intervention services.

7. Specific equipments

- Homologated padlocks and bolts
- Remote door control and unlocking
- Displays to control navigation and communication with drivers
- Hidden sensors, video cameras and microphones
- Alarm buttons in the cabin and trailer and a mobile telephone for the driver

Process

State of the art technology: Teseo Web

Security, quality and logistic efficiency that characterize Logesta have been possible thanks to our bet on state of the art technology.

The application of the latest technologies in the transport sector has been one of the driving forces that have given us the impetus to lead the national and international market. Because of this, we can optimise transport organisation.

Our technological platform -**Teseo Web**-, made-to-measure since 1987, allows us to schedule, optimize and control all transport operations. Being an open system, it enables the integration on line of all involved agents in the transport chain.

TeseoWeb offers:

- Optimization of the transport's flows.
- **CONTROL TOWER:** Real time traceability.
- Flexibility when resolving incidents.
- Generating tailor-made management reports (KPIs).
- Integration with any ERP system of the client (e.g. SAP). and Communication through route generic files or route EDI.
- Visualization of delivery notes in 24 hrs maximum.
- Auto- billing.

This application offers visibility, follow-up and control of all transport operations, allowing any anticipation to delays or incidents, guaranteeing this way the fulfilment of schedules and definitively, a quality service.

For all that, we are your perfect partner

Client

Logesta

The people is the difference

Our highly qualified team has wide experience in the transport management sector and is able to communicate in nearly all the European Union languages.

At Logesta we are committed to continuous training and that is why we implement exhaustive training plans for traffic controllers and drivers, in order to increase their potential for the permanent adaptation to our clients' needs

An added value which reveals the dynamism of our group.

Our commitment, the quality

The effectiveness of the management processes of Logesta is based on the certification of a Quality Management System, according to the **UNE EN ISO 9001:2008** standard.

The continuous improvements of our management system are aimed at achieving the excellence in the service we provide and to progress in the commitment with our clients.

We have also been awarded with the Authorised Economic Operator Certificate for Customs Simplification, Security and Safety, figure which has been developed by the European Commission. This certificate implies a wide range of operational advantages for Logesta, its clients and the customs administration. In short, it means more flexible customs procedures, optimizing flows and transit times for the international transactions of our clients.

We bet on Sustainable Development

Logesta tries to act with responsibility, because we think that it is important to contribute in an active way in the maintenance of our environment where we develop our activity.

That's why our commitment with society and environment is always present day by day, making people aware in an internal and external way that means employees and also clients, haulers and providers.

This commitment has been recognized by the Environmental Management Certificate **UNE-EN ISO 14001:2004**.

We help our clients to obtain their goals

Logesta provides his customers with effective synergies as well as a maximum level of control. We collaborate with them in the consecution of their aims and personalize every project to ensure the maximum efficiency in the service. For every company its product is like gold. And our commitment is to take care of it as such for each and every one of our clients.

Experts in transport consulting

A remarkable and clearly different aspect in Logesta is that we are expert in ad hoc consulting projects for those clients who appreciate the outsourcing of the transport, with or without suppliers' integration. We carry out an analysis that allows getting quickly synergies, maximizing the efficiency of the transport and therefore getting important savings for our customers.

In this sense, our cases of success increase day by day.

Because not all the activity sectors have the same requirements ...

Our vision regarding the service and the logistic sector has led us to offer a specialized policy in different sectors.

Among these sectors, it is necessary to remark our wide experience with tobacco companies, high value products, pharma products, food, paper and industrial products, consumption goods and construction.

We adapt our service to the specific requirements of the goods. In this sense, our fleet is varied: canvas trailer, isotherms, refrigerators, steel coil tautliner trucks, double roof ... We invest also in specific I+D+I, like in the case that the goods need to be temperature-controlled, for which we have an application that, in case of deviation of the prearranged range, the system emits an alarm to our head office to avoid incidents.

The proof of our good know-how is that we have the confidence of recognized brands in each one of these sectors.
