

Logesta, leader in food transport

Logesta
group

Logesta, long-haul transport with a recognised name

Logesta is a company that specialises in long-haul transport and belongs to the **Grupo Logista**, the leading integral logistics operator in Spain and Portugal, and one of the main references throughout Europe. We have one of the widest, most specialised and technologically most advanced infrastructures and transport networks in the continent. We are unquestionable leaders in the national panorama and one of the main operators in the international sphere.

Our excellent service is based on our five values: security, geographic coverage, technology, quality and workforce.

Our continuous growth and development, and the fact that we are always in the technological vanguard, means we can keep our promise:

We transport your goods as you would do it.

Your merchandise transportation, in the best hands

These figures are our endorsement:

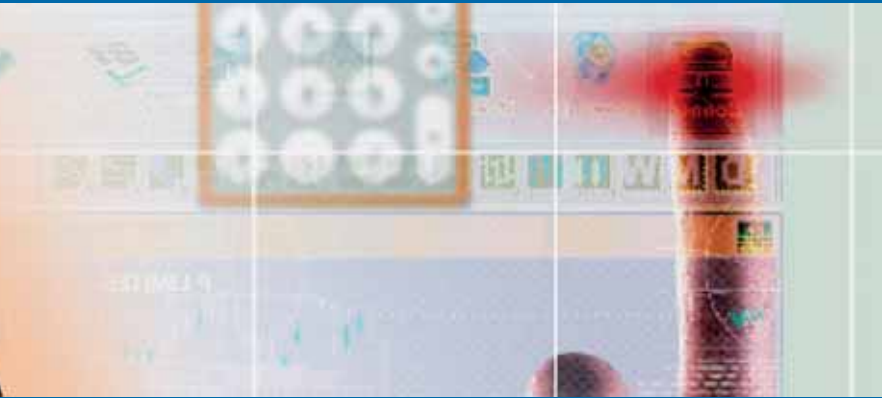

- 1600 vehicles.
- Specific lorries for sub-zero or temperature controlled goods in order to maintain the cold-chain.
- We travel more than 120 million kilometres every year.
- We move more than 5 million tonnes.
- Logesta moves more than 200,000 annual loads (road, train and short sea shipments)

○ Affiliates & Own Branches

Wide geographical coverage

Thanks to our extensive infrastructure and transport network, developed through an effective expansion strategy, we have been positioned in Spain, Portugal, Morocco, France, Italy, Holland, Germany and Poland since 2002. Moreover, we are currently expanding our business lines into Eastern Europe, in a such a way that we can therefore guarantee a quality, border-free service.

Unlike other companies, that only work in the local market, we widen our scope and guarantee an extensive geographical coverage that is continuously changing to sector tendencies and requirements.

Our firm commitment to state of the art technology

The application of the latest technologies in the transport sector has been one of the driving forces that have given us the impetus to lead the national and international market. Because of this, we can optimise transport organisation. Our technological platform -**Teseo Web**-, made-to-measure since 1987, allows us to schedule, optimize and control all transport operations. Being an open system, it enables the integration on line of all involved agents in the transport chain.

TeseoWeb offers:

- Optimization of the transport's flows.
- **CONTROL TOWER:** Real time traceability.
- Flexibility when resolving incidents.
- Generating tailor-made management reports (KPIs).
- Integration with any ERP system of the client (e.g. SAP) and Communication through route generic files or route EDI.
- Visualization of delivery notes in 24 hrs maximum.
- Auto-billing.

Process

R+D+I: the key to leadership

The transport sector is in continuous change that requires and demands a quick response to the customer's needs, ever more demanding when entrusting their loads. Logesta invests in R+D+I and we equip our vehicles with the latest technology. We have the best equipment and best management software solutions, thanks to research, to which we devote a large amount of resources.

Transport security and follow-up

At Logesta we have a follow-up department that is active 24 hours a day, 365 days a year, ready to solve any request or query that our clients may have, as well as solving any incidents that could happen to the vehicle during its trip to the destination.

All our vehicles are equipped with a location and communication system that facilitates the independent follow-up of each tractor unit, trailer and driver in real time, integrated with our management system and a wide network of security companies throughout Europe.

Fleet equipment:

- Homologated padlocks and bolts.
- Remote door control and unlocking.
- Displays to control navigation and communication with drivers.
- Hidden sensors, video cameras and microphones.
- Alarm buttons in the cabin and trailer and a mobile telephone for the driver.

Quality and sustainability, our aim

From its beginnings, Logesta has made a firm commitment to quality and respect for the environment. The efficiency, effectiveness and excellence of Logesta regarding merchandise transport, especially in the food sector, are endorsed by our Quality Management System certificate, in accordance with the UNE EN ISO 9001:2008 norm.

Our commitment to the environment has moved us to certify our Environmental Management System in accordance with the UNE-EN ISO 14001:2004 standards.

We have also been awarded with the Authorised Economic Operator for Customs Simplification, Security and Safety, figure which has been developed by the European Union. This concession gives greater agility for customs clearances, optimising transit flow and time for our clients' international operations.

We work on a daily basis to fulfil and enforce the norm so that we can be proud of being a socially responsible company.

Training and experience, our distinguishing features

Our highly qualified team has wide experience in the transport management sector and is able to communicate in nearly all the European Union languages. We get constant training and recycling to adapt to the continuous acquisitions and applications of specific technologies for the food sector that Logesta integrates into transport.

At Logesta we are committed to continuous training and that is why we implement exhaustive training plans for traffic controllers and drivers, in order to increase their potential for the permanent adaptation to our clients' needs.

An added value which reveals the dynamism of our group.

Specialists in food transport: tracking and temperature control

Because we know that not all goods require the same care, at Logesta we have developed breakthrough technology for our vehicle fleet to transport food efficiently and to guarantee to our customers that the cold chain will be maintained.

Transport is another stage in the life cycle of foods, and it is a stage of vital importance as the product could suffer adverse effects that seriously damage their quality; principle that is present in our day-to-day activity.

All of our refrigerated vehicles are equipped with temperature recorder with printer, which enable delivery to the customer of the temperature chart, with the temperature log to which the goods have been subjected during the trip.

Thanks to special software for a remote reading of the vehicle's temperature, we can carry out remote cold readings in the vehicles. This allows us to control the temperature from our headquarters in real-time. Therefore, if the temperature deviates from the allowable range, an alarm goes off and

the specific action protocols are activated, taking the proper corrective measures and minimising the effects of the incident.

The drivers receive specific and continual training on the operational requirements for food transport and they have all the technical means available in the market at their disposal. They have, for example, temporary temperature recorders in case the vehicle thermograph suffers unforeseen damage; they also have the so-called 'temperature spike' sensor to measure the exact temperature of the load, and check that it fulfils our client's requirements.

Our trailers are equipped with an alternative electrical refrigeration system so that, if the cold equipment diesel engine shuts down during the trip, the refrigeration system keeps on working.

In short, at Logesta we have the technology and the human resources to ensure, at all times, that the cold-chain is maintained.

Faster, more efficient

A service that Logesta offers, new in the full-load sector, is to offer the client the delivery note on unloading, in real-time or within a maximum of 24 hours, thanks to use of an advanced technology system.

Our fleet have scanners on board that allows the driver to send a copy of delivery note to our headquarters, where an OCR filter is applied to improve text quality. Therefore, the client can check, at any time, the details on their delivery notes after unloading at destination.

Another advantage we offer our clients is the possibility of integrating our complete shipment management system (Teseo Web) with other ERP management systems, for example, SAP. Communication between Logesta and its client can be carried out via generic files or via EDI communications, therefore adapting to our customer's technology.

Revolution in schedule adherence

Thanks to our revolutionary Control Tower system we can claim to we manage variability.

At Logesta, we know that food products have to get to the consumer at just the right moment and, at the same time, maintain maximum flexibility in order to address demand fluctuations regarding delivery dates and volumes.

Control Tower, is a system that has been developed to watch over schedule adherence, which is so important in the food sector. It is a control tool that is used to monitor loading and unloading operations. For the user, the system looks like a traffic light that changes to white, red, yellow and green, depending

on the status of the goods in transit, from planning the trip to merchandise delivery at destination.

Control Tower advises on pending operations, incidents and the exact status of the goods.

From our headquarters we control and manage every trip and we ensure that everything has been delivered at the agreed time. Thanks to this system we can offer on-line information about tasks being carried out, avoiding unnecessary telephone calls and double paperwork.

Maximum efficiency at our clients' service.
